

# Upgrading ProfitMaker Plus version 6.0 or 6.1 -to- 6.2

Estimated time to complete: 10 minutes per computer.

This document describes the steps required to update ProfitMaker version **6.0.x** or **6.1.x** to version **6.2** to add new features or fix issues with an older release. When ProfitMaker is running, your version you are running is shown in the top right of the main screen. Write down which older version you have running now: My Old Version is: \_\_\_\_\_

Note: Any numbers after the 6.0 or 6.1 do not matter.

**Note: Always do a backup before doing any upgrades to your computer.** Don't worry, the upgrade process does not affect your data or erase it. This is just a precaution.

## A. Install the New ProfitMaker Plus 6.2

1. Put the ProfitMaker Plus version 6.2 CD you received from us into your computer CD/DVD drive.
2. After a short loading period, the installation program will begin and you will see the setup wizard.
3. Click on the **Next->** button 3 times on the following screens. (this accepts all the defaults).
4. When the installation is complete, click on the **Close** button.  
WOW! That was easy. Just a couple more steps and you are done.

## B. Start ProfitMaker Plus 6.2

Your new ProfitMaker is now installed and ready to start by clicking on the **ProfitPlus6** icon on your desktop. It should show version 6.2 in the upper left corner of the ProfitMaker screen.

## C. Restore your Configuration files

Now you need to get your store information, hardware settings, etc. moved to version 6.2. These are the Application.config and Report.config files. To do so follow these steps starting from the main ProfitMaker screen.

1. At the top menu bar, Go to **File | Restore**.
2. Click on the "**Find Previous Version Config**" button (see figure 1)
3. Under Step 1, you will see the path "**C:\Program Files\PTS\ProfitMaker Plus 5.0\Application.Config**"
4. In the path shown under Step 1, replace the **5.0** with the version you noted at the start of this upgrade above and wrote down in the "My Old Version is: \_\_\_\_". So if your old version was 6.1 replace the 5.0 with 6.1.

Note: Replace **Program Files** with **Program Files (x86)** if you have a 64 bit system.

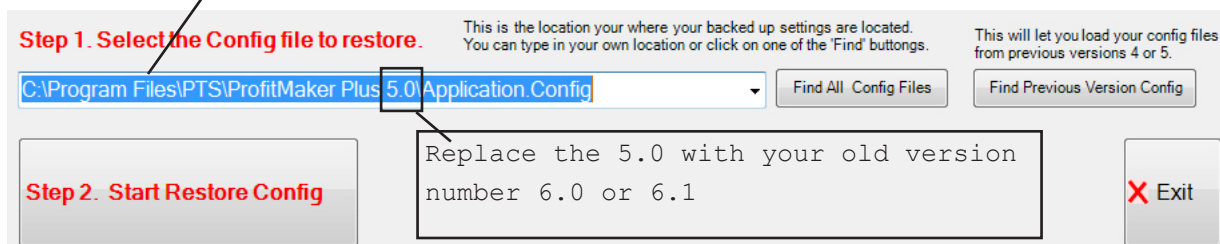

Figure 1.

5. Now that Step 1 shows the correct path to your old application.config file as shown below

C:\Program Files\PTS\ProfitMaker Plus **6.1**\Application.Config (32 bit systems)

Click on the Step 2: **Start Restore Config** button.

6. You will get a warning that you are going to replace the existing config file. Select Yes or Ok to accept.

## D. Upgrade Workstations

If you have more than one computer follow steps A,B and C at each of your ProfitMaker Workstations.

### How do I tell if I have a 32 bit or a 64 bit system?

- a. All of the Dell Studio One 19 All-in-One touch screen systems are 64 bit.
- b. In Windows 7 and Vista, you can click on "Computer" | System Properties and you will see "64 bit operating system". Windows XP is usually 32 bit.
